Earth-Friendly Engine

HYUNDAI-HIMSEN

HIMSEN Family

HIMSEN Family

Design Philosophy

Hyundai's HiMSEN Family have simple and smart design suitable for marine applications with high reliability and performance.

The key features are:

Heavy Fuel Engine with same fuel of main engine (Uni-Fuel concept).

Hence, the diesel fuel and heavy fuel oil of the viscosity of upto 700 cSt at 50 °C is acceptable.

Earth-Friendly Engine

HYUNDAI-HIMSEN

Economical and Ecological Engine with low fuel consumption, NOx emission, and Smoke, etc. , which is based on the below specific designs;

- Optimized Supercharging with Miller Cycle
- High Fuel Injection Pressure

Reliable and Practical Engine with simple, smart and robust structure.

- Number of engine components are minimized with Pipe-Free design
- Most of the components are directly accessible for easier maintenance
- 'Individual Part' maintenance concept is provided
- Feed System is fully modularized with direct accessibility

Earth-Friendly Engine

HYUNDAI-HiMSEN

Main Features

Performance characteristics

- High output in the similar range engines
- Low fuel oil consumption
- Quick acceleration & load response

Maintenance

- Easier maintenance by modularized design
- Minimal number and kind of components

Earth-friendly engine

- Low NOx emissions
- Compliance with IMO NOx Tier II
- Low vibration & noise

Major Application

Marine

- Propulsion system
- Generating sets

Offshore

- Drill ship
- FPSO

Stationary

- Stationary diesel power plants
- Packaged power stations
- Gas engine power plants
- Pre-fabricated power plants
- Barge-mounted diesel power plants
- Emergency diesel generator (EDG) for nuclear power plants

Jack-up Platform/Drilling Rig

FPSO

Drill ship

Car Ferry & Passenger Vessel

Container ship

Diesel Power Plant

Emergency GenSets for Nuclear Power Plant

Earth-Friendly Engine

HYUNDAI-HiMSEN

Introduction

HYUNDAI-HiMSEN

General

This programme provides necessary information and recommendations for the application of HYUNDAI's HiMSEN engines.

'HiMSEN'® is the registered brand name of HYUNDAI's own design engine and the abbreviation of **'Hi-touch Marine & Stationary ENgine'**.

Please note that all data and information prepared in this programme are for guidance only and subject to change without notice. Therefore, please contact Hyundai Heavy Industries Co., Ltd. before actual applications of the data. Hyundai Heavy Industries Co., Ltd. will always provide the data for the installation of specific project.

Engine Model Designation

No. of Cylinders 18 H 32 / 40 V
 HYUNDAI's HiMSEN
 Cylinder Bore in cm
 Piston Stroke in cm
 (empty): Oil
 G: Gas
 (empty): In-line type
 V: Vee type

HYUNDAI-HiMSEN

Engine Operation

Reference Condition

General definition of diesel engine rating is specified in accordance with ISO 3046/1:2002, ISO 15550:2002.

However the engine outputs are available within tropical conditions without de-rating.

Tropical Conditions

- Turbocharger air inlet pressure: 1,000 mbar
- Turbocharger air inlet temperature: 318 K (45 °C)
- Charge air coolant temperature: 309 K (36 °C)*

* Valid for central cooling system up to 36 °C normally, 38 °C specially.

Specific Fuel Oil Consumption (SFOC) & Heat Rate

The stated consumption figures refer to the following ISO reference conditions:

- Turbocharger air inlet pressure: 1,000 mbar
- Turbocharger air inlet temperature: 298 K (25 °C)
- Charge air coolant temperature: 298 K (25 °C)

- Lower calorific value of fuel 42,700 kJ/kg
- Without engine driven pumps
- Tolerance +5 %
- At 100 % load

Specific Lube Oil Consumption (SLOC)

The stated consumption is given with a tolerance of +25% depending on the operating conditions.

Engine Operation

HYUNDAI-HiMSEN

Engine Power

The engine brake power is stated in kW. For conversion between kW and metric horsepower, please note that 1 bhp = 75 kg·m/s = 0.7355 kW.

Ratings are given according to ISO 3046/1:2002, ISO 15550:2002.

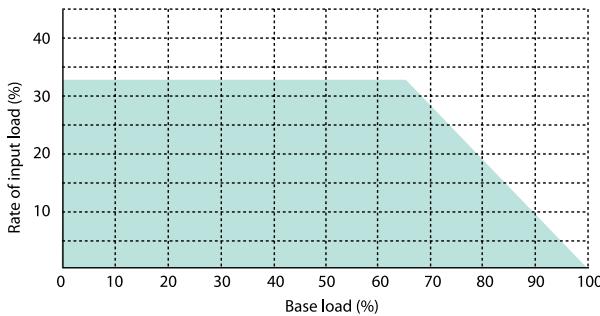

In case of HR(Higher Rating) version, no overload is permissible except for 10 % overload during official factory test.

Power Management of Gensets

When making power management system of multi-Gensets for marine application, a proper load balance is to be considered by shipyard.

In case of a failure of one engine, its output has to be made up for by the remaining engines or by reducing/switching off electric consumers.

No overload of remaining engine is allowed for such a case and the electric power scheme of the ship can be derived from the following load characteristics.

HYUNDAI-HiMSEN

Engine Operation

Continuous Load-Up

The quickest way to load-up from 0 % to 100 % load can be achieved by increasing the load continuously and gradually.

Step by Step Load-Up

Considering the time required for stabilizing the frequency deviation due to sudden load-up, it is recommended to load up from idle to full load by more than three steps IACS (especially for GenSets of 720rpm or 900rpm due to higher BMEP of over 24 bar).

HiMSEN GenSets fulfill the requirements of classification societies concerning the frequency deviation and recovery time when loading up by 3 steps from 0 % to 100 %.

Engine Operation

HYUNDAI-HiMSEN

Information for Fuel oil control by EU Directive 2005-33-EC and California Code of Regulations

All HiMSEN engines are suitable and developed for continuous operation on HFO as well as MDO/MGO. There is no lower limit for the sulfur content of fuel oil. In connection to the low viscosity of MGO, (Marine Gas Oil, DMA as defined in ISO 8217) the viscosity at engine inlet should be kept within the value of 2 ~ 14 cSt in order to avoid possible wear or sticking of fuel injection pump due to low lubricity and in order to maintain the suitable hydrodynamic film between fuel injection pump plunger and barrel.

- Recommended stable viscosity at engine inlet: Min. 3 cSt
- Recommended minimum viscosity at engine inlet: Min. 2 cSt

So, a proper cooling device (D.O cooler or chiller etc.) is to be considered, if needed, to keep the above mentioned viscosity (2 ~ 14 cSt) at engine inlet.

When the MGO is to be used only for temporary engine operation (e.g. in port), higher BN lube oil used for residual fuel (HFO) should not present any problems in case of short periods of running.

When engine is not operated continuously with low sulfur fuel such as MGO, lube oil should be chosen according to the highest sulfur contents of the fuel with normal operation.

HYUNDAI-HiMSEN

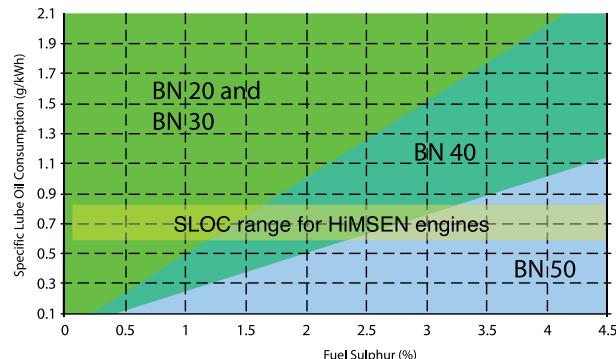

Engine Operation

Guideline for Lube Oil

Base Number (BN) must be carefully selected depending on fuel grade and sulfur contents.

Following are guidance values for initial filling.

Typical recommended BN depending on the fuel sulfur contents and SLOC (g/kWh)

Reference: CIMAC recommendation number 29/2008 'Guidelines for the lubrication of medium speed diesel engine'

IMO NOx EMISSION AND HiMSEN ENGINES

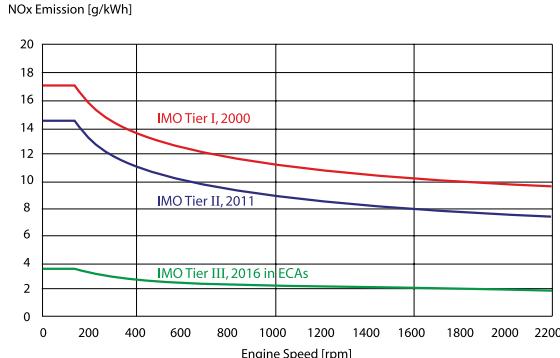

Annex VI of the MARPOL 73/78 convention entered into force 12 May 2005. All HiMSEN engines included in this booklet comply with the NOx Limits specified in the IMO regulation.

The exhaust emission regulations in Annex VI were referred to as IMO Tier I, MARPOL Annex VI regulations were amended at the MEPC (Marine Environment Protection Committee) in October 2008. These specify further NOx emission limits to be known as IMO Tier II and Tier III.

IMO Tier II regulations were entered into force on 1 January 2011 based on keel laying, according to a speed dependent function, with reduction of about 20 % in comparison with IMO Tier I (refer to chart).

Under IMO Tier III, the NOx emission limits for marine engines will become effective on 1 January 2016 based on keel laying, according to a speed dependent function, with reduction of 80 % in comparison with IMO Tier I when the ship is operated in a designated Emission Control Areas (so called ECAs).

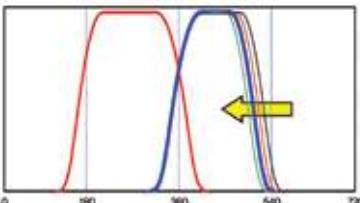

All types of HiMSEN engine are complied with the new upcoming NOx emission regulations, and do its best to satisfy further request if any from customers.

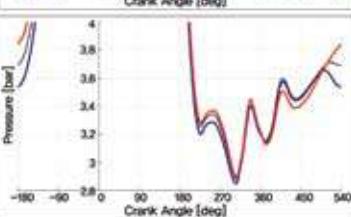

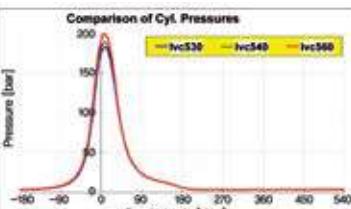

HYUNDAI ENVIRONMENTAL TECHNOLOGIES against IMO Tier II

HYUNDAI is introducing technologies to meet IMO Tier II regulation with internal engine measures only such as:

- Miller valve timing requiring increased charger air pressure by applying the high pressure ratio turbocharger
- Optimised combustion by applying the combustion control technologies with optimising the piston bowl shape and the fuel injection valve nozzle etc.

Various Intake Valve Closing Timing for 1-D Cycle Simulation

Miller valve timing

This technology is very useful to reduce the NOx emission by optimising the intake valve's closing timing especially, result in changing the effective compression and expansion ratio. In order to apply this technology, the high pressure ratio turbocharger is required to increase the charge air pressure and new developed T/C with high pressure ratio is mounted on HiMSEN engine.

Combustion pressure depending on IVC timing from 1-D Cycle Simulation

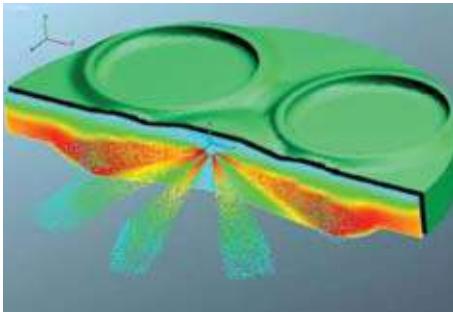

Engine Operation

HYUNDAI-HiMSEN

Optimized combustion

The NOx emission can be reduced by the combustion control technologies with the optimum combination of the piston bowl shape and the fuel injection valve nozzle etc.

The piston bowl shape and the fuel injection valve nozzle's specification are optimized to meet the IMO Tier II regulation, which are evaluated by 3-D combustion analysis and verified by the measurement at HiMSEN Techno Center.

3-D Combustion Analysis

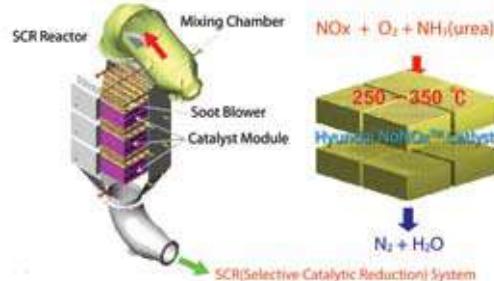

HYUNDAI-HiMSEN

Engine Operation

HYUNDAI ENVIRONMENTAL TECHNOLOGIES against IMO Tier III as one of solutions

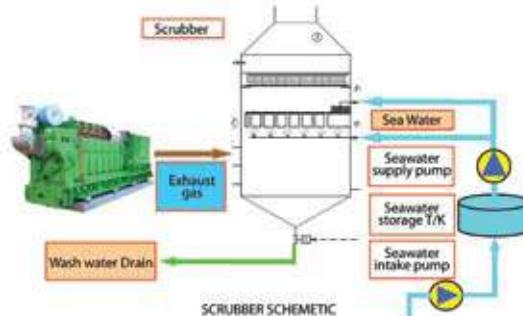

HD NoNox™ SCR (SELECTIVE CATALYTIC REDUCTION) SYSTEM

HYUNDAI can offer NoNox™ SCR technology that can reduce NOx emissions by 95 %, designed for Tier III limits. HYUNDAI is optimizing the whole installation, performance and engine in order to achieve low cost of production and give benefits to the customers.

SCRUBBER

Exhaust gas scrubbing is an alternative solution to low sulphur content fuels for reducing SOx emissions. SCRUBBER has been developed by HYUNDAI for much better quality.

This type of engine is optimized as planning products.

1. Optimized capacity for front module (pump, cooler, filter, valve, etc) .
2. Only 6cyl. for pump cover.
3. Optimized design for crankshaft, engine module.
4. Reducing of weight, simplification, etc.

Marine & Offshore GenSets

HiMSEN...

The best solution for all types of marine vessels and offshore applications with proven reliability, low emission, low operation cost, multi-fuel capability...

Our extensive R&D facilities enable HHI to provide the customers with high quality and excellent services in all phases of designing, production, assembly and commissioning of HiMSEN propulsion packaged system.

Marine Propulsion System

Power Range

H21/32P	1,200~1,800 kW
H25/33P	1,740~2,610 kW
H32/40P	2,880~4,320 kW / FPP 3,000~4,500 kW / CPP

General Information

HYUNDAI-HiMSEN

Long Term Commitment...

To provide the market with reliable, cost effective and earth-friendly solution

Optimized Matching of HiMSEN Propulsion Package

- HiMSEN H21/32P, H25/33P and H32/40P engine
- C.P./F.P. propeller with shafting
- Pitch and speed control
- Load control
- Reduction gear
- Shaft generator
- Auxiliary machinery

Application

- Controllable pitch propulsion
- Fixed pitch propulsion
- Azimuth thruster propulsion
- Pump drive

Excellent Performance of HiMSEN Propulsion Engine

- Improved transient operation with pulse charging turbocharger
- Invisible smoke with pulse charging turbocharger by part load matching
- Lower thermal load engine with lower exhaust gas temperature
- Low fuel consumption
- Low NOx emission

HYUNDAI-HiMSEN

P: Free passage between the engines, width 600 mm and height 2,000 mm.

Note) All dimensions and weight are approximate value and subject to change without prior notice.

**Features**

- Base load operation
- Diesel oil / Heavy fuel oil / Nature gas use
- Compact 40-feet container size
- Mobile type (option)
- Environmentally comfortable
- Low cost of operating and maintenance

Application

- Captive power
- Construction site
- Isolated area
- Rental business
- Pumping station
- Independent power producer

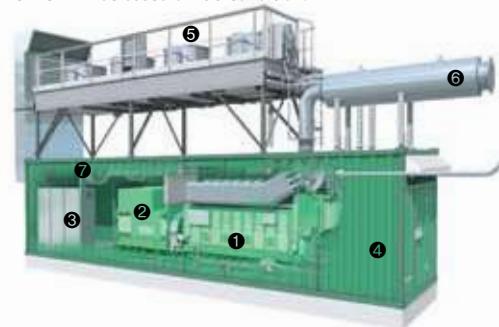

General Specifications

Engine Model	6H17/28	8H17/28	6H21/32	8H21/32	9H21/32
Engine (kW)	690/720	920/960	1,200	1,600	1,800
Generator (kW)	645/673	865/902	1,140	1,520	1,710
Total Weight (ton)	24	30	42	48	50
Dimension (W × H × L)	2.4 m × 3.4 m × 12 m (Container Size)				
Cooling Method	Radiator / Cooling Tower				
Speed	900 rpm / 1,000 rpm				
Fuel	Diesel oil / Heavy fuel oil

HYUNDAI-HiMSEN

Hi-Service**Engine Hi-service system setup**

Our target is to provide quickest and most precious technical support and parts supply towards the customers.

We do utmost to minimize the trouble and inconvenience from the ship owners which might be occurred due to the damage caused by the accident.

Easy Access to Engine CS Department

Regardless of the guarantee period whether it is over or not, HHI will make it a rule to support the clients with immediate service in the order of the receipt by e-mail or through homepage. But, considering its seriousness of the damage or the schedule of the vessel, the provision timing of our technical support including repair may be adjusted.

Genuine Spare Parts Purchase Guide

HHI's authorized sales agents will supply the clients with the original genuine spare parts at the competitive condition in aspect of price, delivery time and quality etc. Please do not hesitate to contact our sales agent with the inquiry or questionnaire.

Technical Support

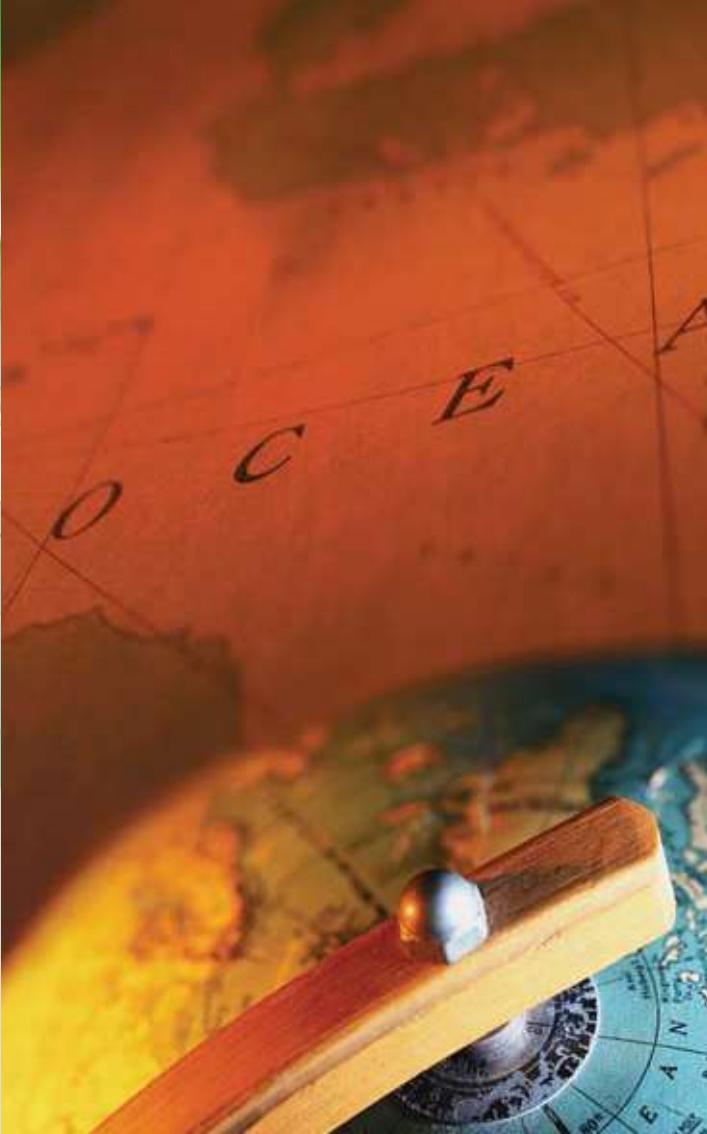

After the guarantee period is expired or in case that the free support is limited even during the guarantee period due to special reason, we also provide the technical support including supervision, reconditioning, conversion, retrofit of alpha cylinder lubricator and technical consultancy etc.

Global Service Network

HHI is very proud of its well organized global service network which is efficiently and systematically designed to meet every requirement of the clients. HHI's direct service centers are established at Rotterdam, Singapore, Dubai, Panama and Havana in Cuba.
